PRE-TREATMENT OF GLASS-CERAMIC RESTORATION (feldspathic ceramics, leucite-reinforced ceramics & lithium disilicate).

Example: GC Initial LRF (leucite-reinforced ceramics) & GC Initial LiSi Press (lithium disilicate).

1. Etch with hydrofluoric acid (~ 5-9%) for 60 sec. in case of feldspathic & leucite-reinforced ceramics and for 20 sec. in case of lithium disilicate.

2. Rinse and dry.

3. Apply G-Multi PRIMER.*

4. Dry with an air syringe.

*1: When using Fuji PLUS or FujiCEM 2, the use of a primer is not mandatory.

PRE-TREATMENT OF METAL & PORCELAIN FUSED TO METAL RESTORATION.

Example: GC Initial Cast NP with GC’s veneering ceramic GC Initial MC

1. If not done by the lab, sandblast (Al₂O₃ ≤ 50μm).

2. Rinse and dry.

3. Apply G-Multi PRIMER.*

4. Dry with an air syringe.

*2: When using Fuji I, Fuji PLUS, FujiCEM 2 or G-CEM LinkAce, the use of a primer is not mandatory.
PRE-TREATMENT OF ZIRCONIA OR ALUMINA RESTORATION.
Example: GC Initial Zirconia Disk

1. If not done by the lab, sandblast \((\text{Al}_2\text{O}_3 \leq 50\mu\text{m})\).
2. Rinse and dry.
3. Apply G-Multi PRIMER.*
4. Dry with an air syringe.

*<sup>3</sup>: When using Fuji I, Fuji PLUS, FujiCEM 2 or G-CEM LinkAce, the use of a primer is not mandatory.

PRE-TREATMENT OF COMPOSITE RESTORATION.
Example: GC GRADIA PLUS

1. If not done by the lab, sandblast \((\text{Al}_2\text{O}_3 \leq 50\mu\text{m})\).
2. Rinse and dry.
3. Apply G-Multi PRIMER.*
4. Dry with an air syringe.

*<sup>4</sup>: When using Fuji PLUS or FujiCEM 2, the use of a primer is not mandatory.
PRE-TREATMENT OF HYBRID CERAMIC RESTORATION.
Example: GC CERASMART

If not done by the lab, sandblast (Al₂O₃ ≤ 50μm). Alternatively, for CERASMART, if you don’t have a sandblaster, apply hydrofluoric acid for 60 sec.

PRE-TREATMENT OF FIBER POST.
Example: GC Fiber Post

1. Clean with alcohol.
2. Dry.
3. Apply G-Multi PRIMER.
4. Dry with an air syringe.
